Nature of Accountability for Safety & Training

Presenter: Tom Ambrose

OneNASA: a mini story

In 1998 ARC offered its Accountability for Safety & Performance Web based Software to the Agency to track supervisors':

- Monthly Safety Meetings
- Monthly Safety Inspections
- Workforce Safety Training
- Hazard Correction

DFRC Safety and Health were impressed, took up Ames offer and with much free help from Ames was able to launch DFRC's Accountability for Safety and Training program in only six years.

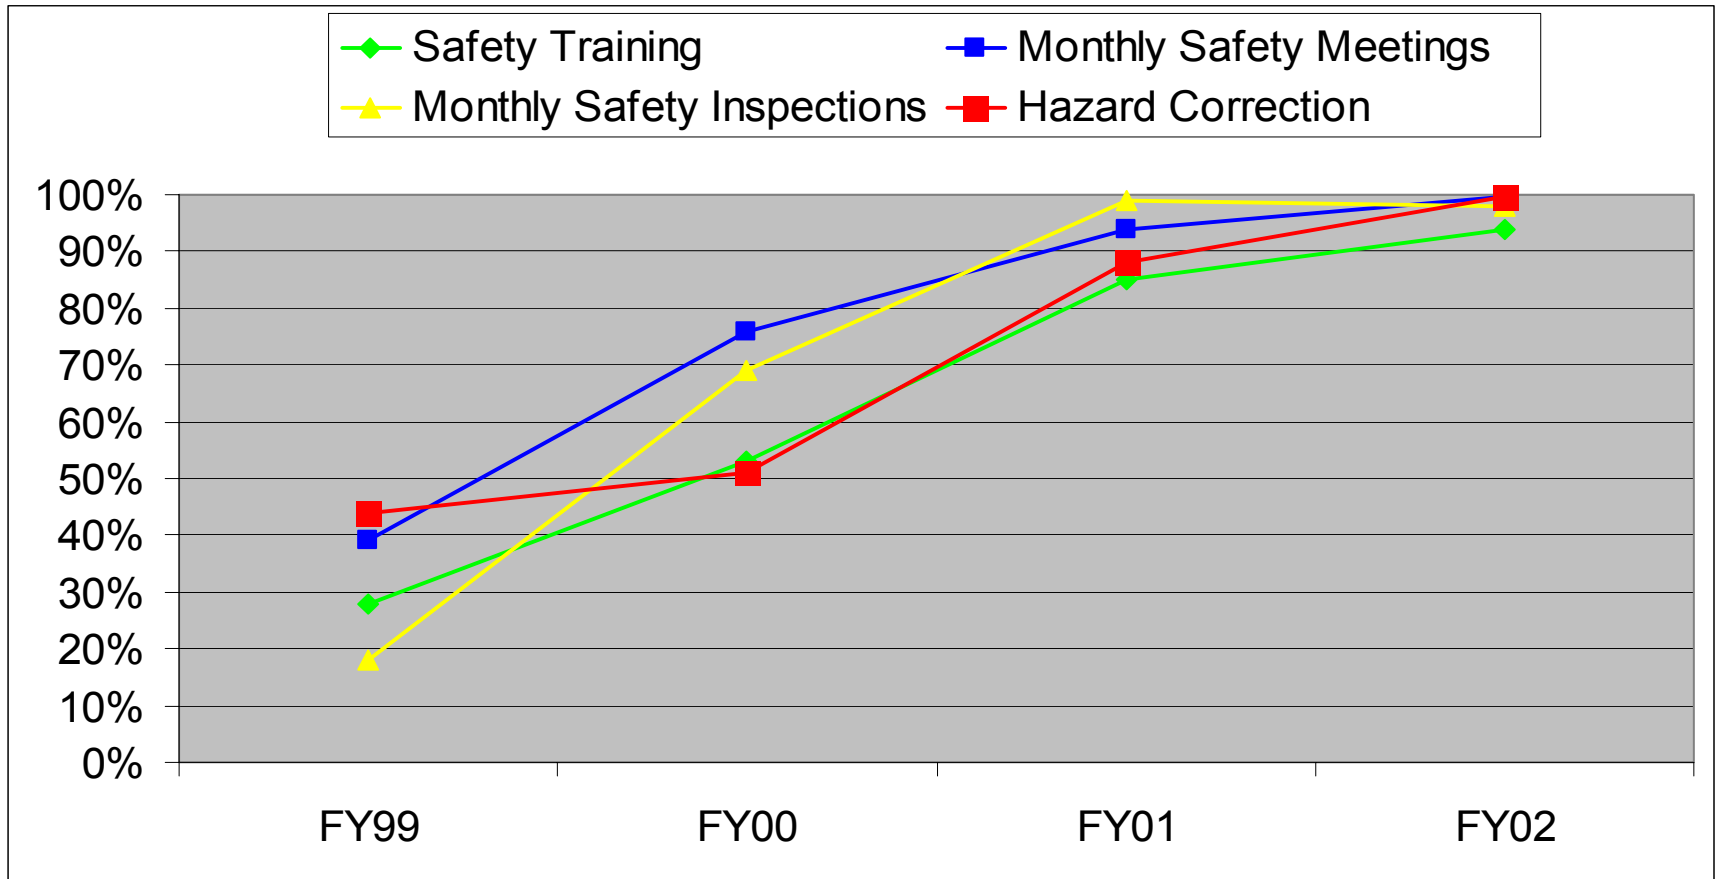

- DFRC recently repaid the favor by enhancing the ARC server, with auto back up and increased IT security function.

By the way, this system provides all the data automatically that the new NASA performance standard requires for supervisors safety metrics.

ASAP Performance

Total of approximately 4,000 classes FY02
Over 800 meetings per year
Over 1,500 inspections per year
Approximately 200 total hazards for FY02

Element 2: Health and Safety

Standard: The manager is generally satisfied that decisions and actions demonstrate commitment to the Agency's #1 core value – safety; the supervisor

- Conducts and documents safety inspections of assigned area(s) of responsibility in accordance with applicable safety and occupational health regulations, policies, and procedures;
- Identifies and expeditiously takes action to correct unsafe conditions and/or procedures; and
- Ensures that his/her employees comply with applicable safety and occupational health standards, rules, and regulations.
